I. FY 2025 IMPACT GRAPHICS

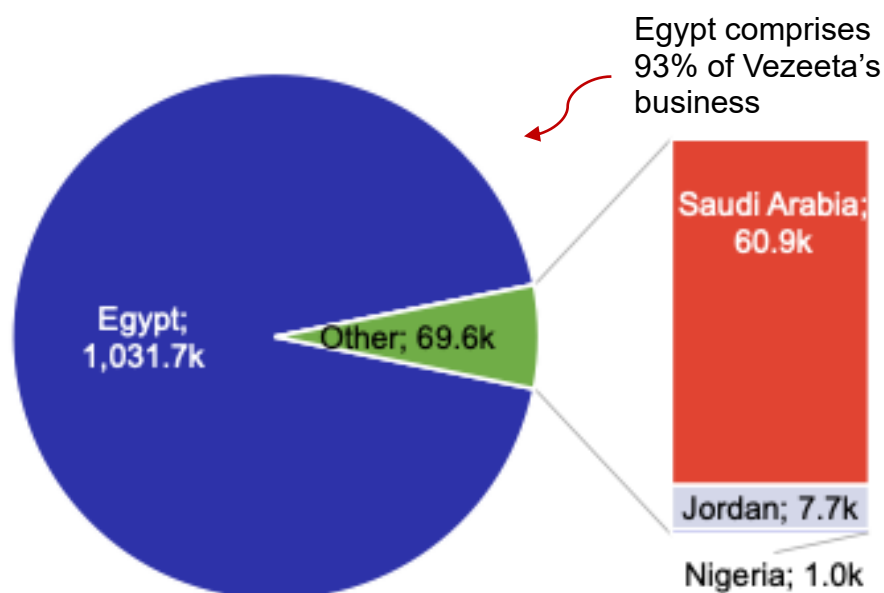

1. Unique Patients and Patient Services Facilitated (Cumulative)¹

N~9,440,811 unique patients; 23,040,946 services facilitated

¹ Due to a change in data collection methodology, the financial data for Vezeeta in 2025 was sourced directly from monthly profit and loss statements, rather than the consolidated annual reports utilized in prior years. Aggregated figures were derived from these periodic financial disclosures to ensure continuity of impact measurement across the portfolio.

2. Patients Served by Geography (2025, rounded) N ~ 1,101,783 (2025); 9,440,811 (cumulative)

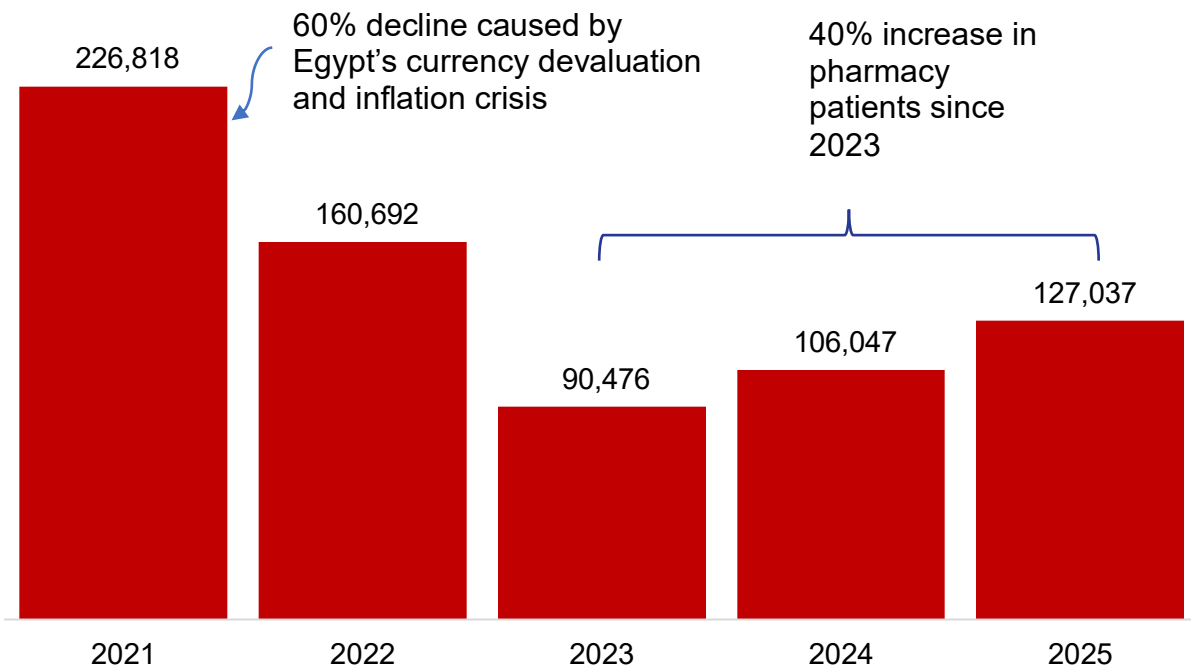

3. Commercial and Other Forms of Distribution by Geography (Cumulatively)² 78 Cities across 6 countries in Africa (2025)

² >90% of patients served in FY 2025-2026 were in Egypt. Vezeeta continues to evaluate service expansion opportunities in Sub-Saharan Africa. In previous reports, TEAMFund included data from Lebanon and Kenya, which are not represented in this report.

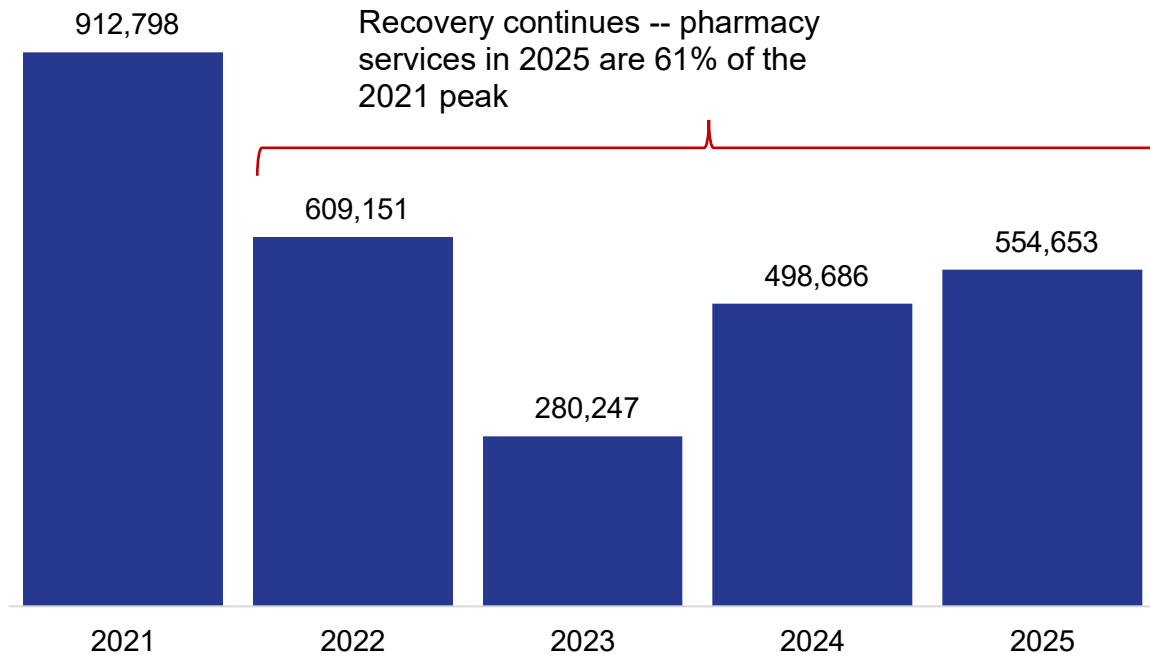

4. Pharmacy Patients Served by Year (Cumulative)

N ~ 127,037 patients served (2025); 711,070 (cumulative)

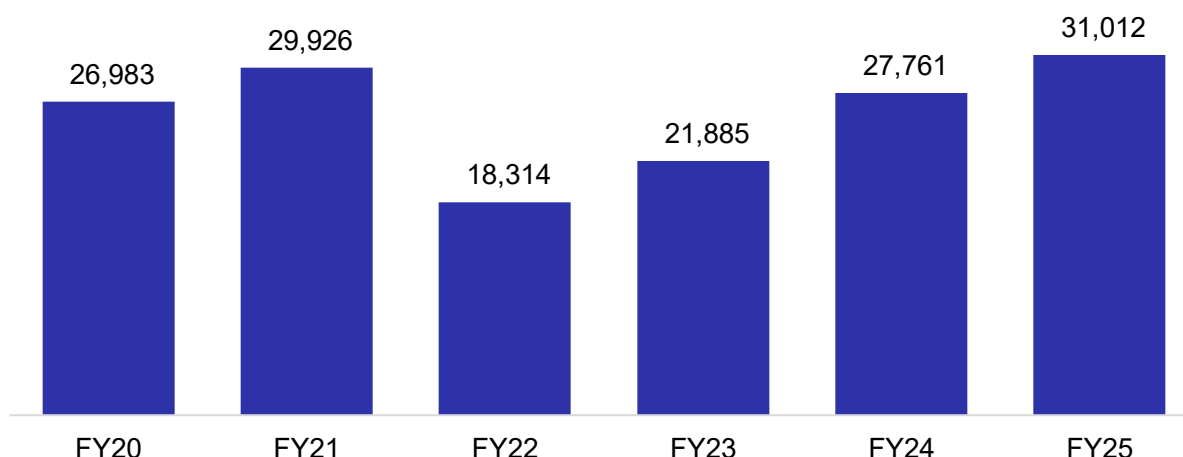

5. Pharmacy Services Provided by Year (Cumulative)

**N ~ 554,653 pharmacy services provided (2025);
3,118,606 (cumulative)**

6. Number of Healthcare Providers by year^{3,4,5}

N ~ 31,012 medical providers (as of year's end FY2025)

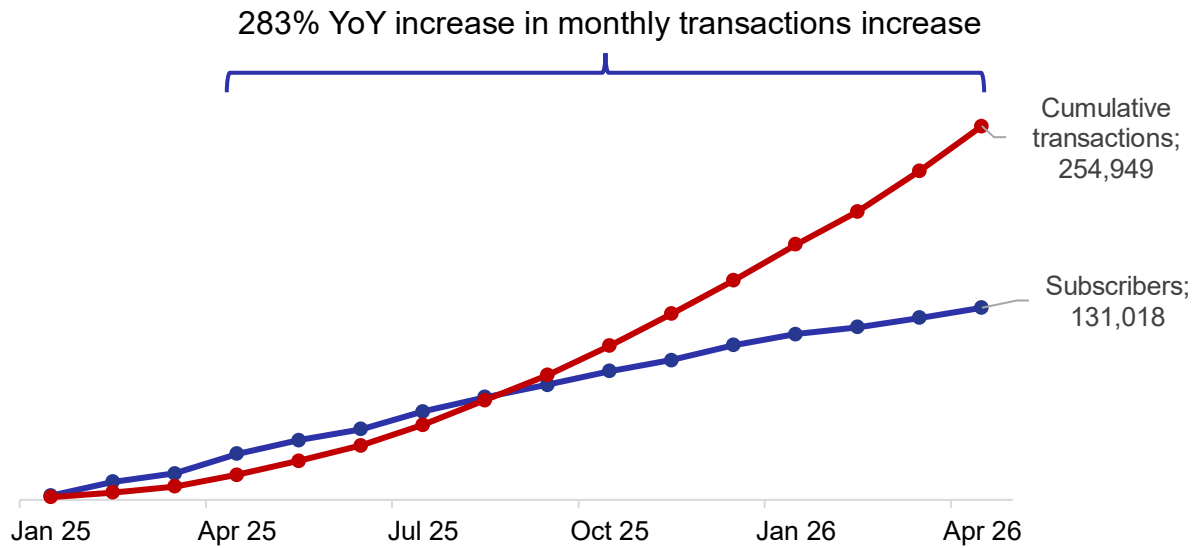

³ Providers are distributed across private clinics, polyclinics, hospitals, laboratories, and scan centers. In the context of the Egyptian healthcare system, a polyclinic is a medical facility that provides a wide range of outpatient healthcare services across multiple specialties. It is designed to offer patients access to various types of medical consultations and treatments in one location, typically without the need for hospitalization. Polyclinics in Egypt commonly serve as a more affordable and accessible alternative to larger hospitals, especially for primary care and routine medical services. These clinics are often found in both urban and rural settings, helping to bridge the gap between small private practices and larger hospitals. They play a significant role in expanding healthcare access to underserved populations, particularly in areas where healthcare infrastructure may be limited.

⁴ Reporting methodology adjusted in FY 2022-2023 report to reflect only new doctors trained (as opposed to the year-over-year increase in the total active doctor network).

⁵ Breakdown of total active doctors in the Vezeeta network as of 3/31/26.

7. Number of Shamel subscribers by month (Jan 2025-April 2026)

N~131,018 subscribers (Apr 2026); 254,949 transactions (cumulative); 25% underserved⁶

⁶ Patient status was not available from Vezeeta in 2025, TEAMFund leveraged data from the last three years to estimate the number of underserved patients for this report.
